25X1

1. The new refinery at Cerrik is expected to produce about 500,000 tons annually.<sup>1</sup> Installation of the first section of the pipeline between Cerrik and Stalin (Kucove) has already been completed. The pipe has a diameter of 50 cm.
2. Transportation from the refinery to the Tirana-Elbasan railway line is provided by a standard gauge branch line 11 kilometres long. In addition, a section of asphalt road linking up with the Tirana-Elbasan highway has also been constructed parallel to the branch railway line.

1. Comment: The refinery is expected to be completed in 1955 as one of the major projects of the Five Year Plan; however, it is believed that its capacity will be considerably less than the amount mentioned here.
